Students participating in a History lesson with the Year 5 class

In mixed groups, the students were given an enquiry question on Government to begin researching. Using technology as their focus, they will later present back to the group and share what they have learned. It is an introduction to flexible learning spaces and a futuristic approach to 21st Century learning in the classroom.

Students participating in Lumosity - an online brain training program

Lumosity is designed to challenge their thinking and addresses areas such as attention, flexibility, memory, speed and problem solving. Students access this for a short time daily through our class blog. The program gives them immediate feedback in the form of a graph, comparing all five areas. Students can see their improvements each day as their results are updated.

Students reading each other’s persuasive texts and providing feedback while referring to a NAPLAN checklist
